Abra 2026 Vision: The Complete Digital Asset Investing Platform

Trade. Earn. Borrow. — Working in Concert.

Draft v2 — March 14, 2026

Executive Summary

Abra's mission in 2026 is singular: **become the definitive digital asset investing platform where trading, earning, and borrowing work as one integrated experience.** Not three products stitched together — one platform where every capability amplifies the others.

The flywheel is simple: - **Trade** brings assets onto the platform (AUM growth) - **Earn** gives clients a reason to stay and compound (retention + yield) - **Borrow** unlocks liquidity without selling (deeper engagement + revenue) - Each capability makes the other two more compelling

Today, ACM has the regulatory moat (SEC-registered RIA, fiduciary, SMAs) and the institutional infrastructure (Fireblocks custody, OTC desk, 500+ assets). What it lacks is **product depth that matches the regulatory advantage** — particularly in Earn, where yield opportunities are mediocre, staking coverage is limited, and product claims remain unvalidated with users.

This document lays out the vision, requirements, competitive landscape, go-to-market strategy, risks, and execution plan to grow ACM from ~$500M to $2B+ AUM in 2026, while building the foundation for $5B+ in 2027.

---

1. Vision & Thesis

The Opportunity

The digital asset wealth management market is at an inflection point:

- **Institutional adoption is accelerating.** Bitcoin ETFs crossed $100B+ in AUM. Stablecoins are projected to reach $1.2T by 2028 (Coinbase Institutional). Tokenized equities grew 2,800% YoY to ~$963M in market value as of January 2026.
- **RIAs are desperate for crypto solutions.** Over 70% of financial advisors report client demand for crypto exposure, yet fewer than 15% have a compliant way to offer it. The gap between demand and access is a trillion-dollar opportunity.

- **Regulatory clarity is emerging.** The SEC has clarified tokenized securities rules (Jan 2026), the GENIUS Act has passed, and the Crypto Task Force is actively engaging with industry. The regulatory environment is more favorable than at any point in crypto history.
- **No one owns the integrated experience.** Competitors offer pieces — Eaglebrook does SMAs, Coinbase does custody and trading, Kiln does staking. Nobody offers Trade + Earn + Borrow as an integrated, fiduciary-grade platform for RIAs.

Abra's Unfair Advantages

1. **SEC-registered RIA** — Only regulated US platform offering custody + trading + yield + lending under the RIA umbrella with fiduciary duty
2. **Separately Managed Accounts (SMAs)** — Client assets are bankruptcy-remote, held in segregated Fireblocks MPC wallets. Not commingled. Not on Abra's balance sheet.
3. **Fiduciary standard** — In a post-FTX/Celsius world, this matters more than anything
4. **Full-stack infrastructure** — Vault (custody), Prime (500+ assets OTC), yield strategies, and lending already operational
5. **USDAF** — Proprietary stablecoin generating native yield (target 5-15% APY via delta-neutral hedging), a unique Earn product no competitor can replicate
6. **Going public via SPAC** — $150M in growth capital, NASDAQ listing, institutional credibility

The North Star

Abra becomes the platform that every RIA and HNW investor uses to manage their digital asset portfolio — not because we're the cheapest or flashiest, but because we're the only platform where they can trade any digital asset, earn institutional-grade yield on every holding, and borrow against their portfolio without selling — all under a fiduciary wrapper with segregated custody.

---

2. Current State & Gaps

What's Working

Capability	Status	Strength
Vault (Custody)	Live	Fireblocks MPC, SMAs, institutional-grade
Abra Prime (Trading)	Live	500+ assets, OTC desk, API, 24/7

Capability	Status	Strength
Abra Private (HNW Advisory)	Live	White-glove service, direct relationships
Abra Treasury	Live	Corporate treasury management
Lending	Live	BTC/ETH collateral, 50% LTV, open-term
USDAF	Launching	Solana-native, delta-neutral yield, seed program active

Critical Gaps

Earn Products (Highest Priority)

- **Yield opportunities are mediocre.** Current yields (BTC 2-5%, ETH ~3%, SOL ~8%, USDC 3-6%) are competitive but not compelling. Clients can get similar rates at Coinbase or through ETF staking products.
- **Limited staking coverage.** We don't allow users to stake many major proof-of-stake assets. Missing: AVAX, DOT, ATOM, NEAR, TIA, SUI, APT, and dozens of others that institutional staking providers like Kiln and Figment support.
- **Unvalidated product claims.** Yield products exist on paper but haven't been stress-tested with actual user feedback. Product-market fit for specific yield strategies is assumed, not proven.
- **No structured products.** Missing model portfolios optimized for yield, no income-focused strategies, no auto-compounding, no yield aggregation across protocols.
- **USDAF integration incomplete.** The highest-yield product in our arsenal (sUSDAF at 5-15% APY) isn't yet embedded in the ACM experience as the default stablecoin yield option.

Trade Execution

- **No exchange partnership.** All trading runs through Abra Prime OTC desk. For smaller trades and broader asset access, a major exchange integration (Kraken) would dramatically improve execution quality, price discovery, and asset coverage.
- **No tokenized equities.** Clients who want 24/7 equities exposure alongside crypto have nowhere to go within ACM.

Borrow Experience

- **Friction-heavy process.** Current lending requires manual interaction, limited collateral types (BTC/ETH only), and the UX doesn't match the streamlined experience our retail app offered years ago.
- **No instant borrowing.** Competitors like Ledn and Nexo offer near-instant crypto-backed loans. ACM's process feels institutional in the wrong ways.

Distribution

- **Zero RIA integrations.** We have no third-party RIA partners using our platform to serve their clients. This is the single biggest growth lever available.
- **No portfolio reporting integrations.** RIAs live in Orion, Black Diamond, Addepar, and Schwab. If we don't feed into their systems, we don't exist.

---

3. Product Strategy

3A. Earn — The #1 Priority

The Earn pillar is what transforms ACM from a custody + trading platform into a **wealth-building platform.** When clients can earn compelling, validated yield on every asset they hold, they deposit more, trade more, and never leave.

Expanded Staking

Asset	Current	Target APY	Provider Model
ETH	~3%	3.5-4.5%	Kiln/Figment institutional validators
SOL	~8%	7-9%	Direct validator + MEV rewards
DOT	Not offered	12-15%	Nomination pools
ATOM	Not offered	15-20%	Validator delegation
AVAX	Not offered	8-10%	Delegation
TIA	Not offered	10-15%	Delegation
SUI	Not offered	3-5%	Validator staking
APT	Not offered	7-8%	Delegation
NEAR	Not offered	5-7%	Delegation

Implementation: Partner with Kiln (institutional staking infrastructure, already integrated with Ledger/Fireblocks) or Figment for non-custodial staking. Abra earns a margin on staking rewards (typically 5-15% of yield).

Yield Strategies

1. **USDAF/sUSDAF Integration** — Make sUSDAF (5-15% target APY) the default stablecoin yield product within ACM. Every dollar sitting idle in a client account should auto-sweep into sUSDAF unless opted out.
2. **BTC Yield Enhancement** — Move beyond basic lending yield. Covered call strategies on BTC (8-12% APY) for clients who want income over pure HODL exposure.

3. **Structured Income Portfolios** — Pre-built model portfolios optimized for yield:
    - *Conservative Income:* 60% sUSDAF + 20% ETH staking + 20% BTC yield → target 6-8% blended
    - *Balanced Income:* 40% sUSDAF + 25% ETH + 15% SOL + 10% DOT + 10% BTC yield → target 8-12%
    - *Aggressive Income:* 30% sUSDAF + 20% SOL + 15% TIA + 15% ATOM + 10% DOT + 10% ETH → target 10-15%
4. **Auto-Compounding** — All staking and yield rewards automatically reinvested unless client opts for distribution.
5. **Yield Validation Program** — Before launching any yield product, run a 90-day pilot with 10-20 existing clients. Track actual vs. projected yields, gather NPS scores, iterate. No unvalidated claims go to market.

Revenue Model for Earn

- Staking margin: 5-15% of yield earned (industry standard)
- Yield strategy management fee: 0.5-1% AUM annually
- sUSDAF spread: 0.5-1% on TVL (USDAF delta-neutral yield minus sUSDAF payout)
- At $1B Earn AUM: **$10-15M annual revenue from Earn alone**

3B. Trade — Kraken Partnership & Execution Upgrade

Kraken Strategic Partnership

The Kraken partnership serves two strategic purposes:

1. **Enhanced Trade Execution** — Integrate Kraken's institutional API into both ACM and Abra Prime:
    - 2.5ms execution latency, 99.9% uptime, 1M+ API requests/minute
    - Deep liquidity across 200+ trading pairs
    - Segregated accounts and audit trails (aligns with ACM's fiduciary model)
    - Better price discovery for clients vs. current OTC-only model for smaller trades
    - **ACM benefit:** Clients get exchange-grade execution with RIA-grade compliance
    - **Prime benefit:** Higher throughput, tighter spreads, access to Kraken's liquidity pools
2. **USDAF Listing** — Getting USDAF listed on Kraken is a distribution accelerant:
    - Access to Kraken's institutional and retail user base
    - Credibility signal for USDAF (Kraken's listing standards are rigorous)
    - Trading pairs (USDAF/USD, USDAF/USDC, USDAF/BTC) drive organic demand
    - Potential co-marketing opportunities

Deal structure recommendation: Revenue-sharing model where Kraken earns a referral fee on ACM accounts originated through their platform, and Abra provides preferential USDAF staking terms for Kraken's institutional clients.

Tokenized Equities — A New Asset Class for ACM

The tokenized equities market has exploded: **$963M in market value as of January 2026, up 2,800% YoY** (CoinDesk). The SEC has clarified regulatory frameworks, and major infrastructure is being built:

- **Ondo Finance** acquired Oasis Pro (SEC-licensed broker-dealer/ATS) — the leading tokenized equities platform with 50%+ market share
- **Securitize** launching "Stocks on Securitize" in Q1 2026 — natively tokenized (not synthetic) shares
- **Nasdaq + Kraken** announced tokenization infrastructure partnership (March 9, 2026) — directly relevant to our Kraken relationship

Abra's approach:

1. **Partnership model** — Integrate with Securitize or Ondo as tokenized equity providers. Abra doesn't need to become a broker-dealer; we can offer tokenized equities through our RIA wrapper as investment recommendations.
2. **Regulatory framework** — Under the RIA model, recommending tokenized securities to clients is within our fiduciary authority, provided proper disclosures and suitability analysis. The SEC's January 2026 guidance distinguishes issuer-authorized tokenized securities (green light) from synthetic/unauthorized tokens (heightened scrutiny).
3. **Initial offering** — Start with tokenized versions of major indices and blue-chip stocks (S&P 500, NASDAQ 100, AAPL, MSFT, GOOGL, AMZN). 24/7 trading, fractional ownership, on-chain settlement.
4. **Integration with Earn** — Tokenized equities that pay dividends can be part of income portfolios. USDAF as settlement currency for equity trades creates a closed-loop ecosystem.

Target: Launch tokenized equities within ACM by Q3 2026 via partnership agreement.

3C. Borrow — Streamlined Experience

The borrowing experience needs to feel as simple as our retail app once did, while maintaining institutional-grade risk management.

Current vs. Target Experience

Feature	Current	Target
Collateral types	BTC, ETH only	BTC, ETH, SOL, tokenized equities, sUSDAF

Feature	Current	Target
Max LTV	50%	Up to 65% (tiered by asset volatility)
Approval time	Manual review	Instant (pre-approved credit lines based on portfolio)
Rate	~6% APY	4-8% variable (tiered by LTV and collateral quality)
UX	Form-based, manual	One-click borrow against existing vault holdings
Repayment	Open-term manual	Flexible: auto-deduct from yield, scheduled, or open-term

Key Improvements

1. **Pre-approved credit lines** — Every ACM client with vault holdings gets a pre-approved borrowing limit displayed on their dashboard. No application needed. Click to draw.
2. **Borrow-to-yield arbitrage** — Borrow at 6% against BTC, deploy into sUSDAF at 8-12% = net positive carry. This should be a one-click product.
3. **Expanded collateral** — Accept SOL, major altcoins, and eventually tokenized equities as collateral. Each asset has risk-adjusted LTV ratios.
4. **Yield offset repayment** — Allow clients to auto-repay loans from Earn proceeds. Borrow against BTC, earn on sUSDAF, earnings automatically reduce loan balance.
5. **Mobile-first** — The borrow experience must work seamlessly on the mobile app (planned Q2 2026).

Revenue Model for Borrow

- Net interest margin: 2-4% spread (borrow at 4-8%, fund from DeFi/institutional sources)
- At $200M loan book: **$4-8M annual revenue**

3D. The Flywheel — How Trade + Earn + Borrow Compound

```
┌──────────────────┐
│   NEW CLIENT     │
│  (RIA / HNW)     │
└──────────────────┘
        │
        ▼
┌──────────────────
```

```
│     TRADE      │ ← Kraken execution, 500+ assets,
│   Deposit AUM  │   tokenized equities
└────────────────┘
        │
        ▼
┌────────────────┐
│     EARN       │ ← Staking, sUSDAF, yield strategies,
│  Grow Holdings │   structured income portfolios
└────────────────┘
        │
        ▼
┌────────────────┐
│    BORROW      │ ← Instant loans, yield offset,
│Unlock Liquidity│   expanded collateral
└────────────────┘
        │
        ▼
┌────────────────┐
│  RE-INVEST     │ ← Borrowed funds → more trades
│                │   → more earning → more borrowing
└────────────────┘
```

The compounding effect: - A client deposits $1M in BTC via Trade - Earns 3-5% yield via Earn (BTC staking + covered calls) - Borrows $300K at 6% against the BTC via Borrow - Deploys $300K into sUSDAF earning 10% via Earn - Net: Client is earning ~$80K/year on a $1M deposit, with $300K in liquid borrowing capacity - Abra earns: trading fees + staking margin + yield management fee + lending spread = **~$25-35K in annual revenue per $1M AUM**

At $2B AUM with 30% Earn participation and 15% Borrow utilization, this flywheel generates **$40-60M in annual revenue.**

---

4. RIA Distribution Model

Why RIAs Are the Growth Channel

- **~15,000 SEC-registered RIAs** manage $128T+ in client assets
- **RIA referral is the most efficient acquisition channel** — one RIA integration = hundreds of end-clients
- **Fiduciary alignment** — RIAs are already fiduciaries; they understand and value Abra's model
- **Sticky relationships** — RIA-managed assets are far stickier than direct-to-consumer
- **Lower CAC** — Acquiring one RIA with $500M AUM is infinitely more efficient than acquiring 500 individual $1M clients

Integration Model

Tier 1: API/White-Label Integration (Target: 5-10 RIAs in 2026)

Abra provides the technology and compliance infrastructure; the RIA provides the client relationships.

What the RIA gets: - Branded portal (or white-label) for their clients to trade, earn, and borrow digital assets - Fiduciary-compliant digital asset allocation within their existing advisory practice - Portfolio reporting data feeds compatible with Orion, Black Diamond, Addepar, and Schwab - Automated compliance (suitability checks, risk disclosures, ADV amendments) - Access to USDAF and all Earn products for their clients

What Abra gets: - AUM growth at scale (each RIA = $100M-$1B potential) - Revenue share on all platform activities - Network effects (RIA success stories → more RIAs)

Pricing model: - Platform fee: 25-50 bps on AUM managed through the integration - Revenue share: Abra keeps 60-70% of trading, earn, and borrow revenue; RIA keeps 30-40% - No upfront cost to the RIA (align incentives with AUM growth)

Tier 2: Referral/SMA Model

For smaller RIAs not ready for full integration: - RIA recommends Abra ACM to clients - Clients open direct ACM accounts with RIA as advisor of record - RIA earns trailing referral fee (10-20 bps on AUM)

RIA Tech Stack Integration Roadmap

Platform	Priority	Integration Type	Timeline
Addepar	P1	Portfolio data feed + reporting	Q2 2026
Orion	P1	Portfolio accounting + performance	Q2 2026
Black Diamond	P2	Performance reporting	Q3 2026
Schwab Advisor Services	P2	Custodial integration	Q3-Q4 2026
Tamarac (Envestnet)	P3	Rebalancing + billing	Q4 2026

RIA Targeting Criteria

Ideal first partners (2026): - AUM: $500M-$5B - Already have digital asset interest or allocation policy - Tech-forward (use modern portfolio platforms) - Client base includes HNW with crypto holdings - Geographic: Initially US-focused (NYC, Miami, SF, Palm Beach, Austin)

Pipeline approach: 1. Leverage existing network (Abundance Summit, Bill's investor relationships) 2. Target RIAs already on Eaglebrook/Onramp for the trade-only SMA → pitch upgrade to full Trade+Earn+Borrow 3. Conference circuit: Future Proof, T3 Technology, Schwab IMPACT 4. Direct outreach through Andrew Burton's institutional network (starts March 18)

2026-2027 RIA Scaling Plan

Metric	H1 2026	H2 2026	2027
RIA Partners	2-3 signed	5-10 live	25-50
RIA-sourced AUM	$50-100M	$200-500M	$2-5B
Revenue from RIA channel	$0.5-1M	$2-5M	$15-30M

---

5. Competitive Landscape

Direct Competitors

Company	Offering	Strengths	Weaknesses	AUM
Eaglebrook	BTC/ETH/custom SMAs, tax-optimized, multi-manager (Bitwise, Franklin Templeton, ARK, Global X)	50+ RIA firms, 650+ advisors, Anchorage custody, DACFP listed	**Trade only** — no yield, no borrow, no staking. $25K minimum. ~2.25% all-in fees	Targeting $1B (GENIUS Act tailwind)
Anchorage/SFA	Federal bank + RIA platform (acquired Securitize For Advisors Dec 2025)	Only federally chartered crypto bank; 4,500% AUA growth pre-acquisition; unified trade + custody + RIA interface	Limited yield/earn; borrow not in RIA channel; acquisition integration risk; Securitize parent splitting attention on tokenization	Not disclosed
Gemini/BITRIA	Exchange + trust custody + RIA TAMP (acquired	**Tamarac/Envestnet integration** = access to 3,000+ RIAs	No yield or borrow for RIAs; Earn controversy/FTX history; limited	Not disclosed

Company	Offering	Strengths	Weaknesses	AUM
	BITRIA Feb 2023)	managing $1.3T+; NY-regulated trust company	institutional staking	
Bitwise	ETFs, SMAs (via Eaglebrook), private funds, DeFi vaults (Morpho)	$15B+ AUM, 5,000+ advisors, 21 banks/BDs, iCapital partnership, 8-year track record	Asset manager not platform — no custody, trading, or lending directly	$15B + (fund AUM)
Coinbase Institutional	Prime brokerage, custody, staking (20+ assets), financing, Coinbase Wealth (UHNW/family offices), Standard Chartered partnership	Full-stack institutional; deepest liquidity; staking ETP custody provider; massive brand	Not RIA-native — designed for hedge funds/institutions broadly; complex UX; high fees for smaller RIAs	N/A
Galaxy Digital	Trading, lending, mining, advisory, State Street SWEEP fund ($200M seed)	Full-stack digital assets firm, institutional DNA, strong partnerships	Large-institution focus, Canadian-listed, complex onboarding	$5B+
Grayscale	ETFs, ETPs, single-asset trusts, **first US staking ETPs** (Oct 2025), going public via S-1	$35B+ AUM, 2x brand awareness vs peers, broadest product shelf (20+ products)	Product shelf only — no platform, no custody, no yield, no borrow. High legacy fees.	$35B +

2025 Consolidation Wave — The Landscape is Shifting

Acquirer	Target	Date	Price	Impact
Anchorage Digital	Securitize For Advisors	Dec 2025	N/A	Federal bank + RIA platform = most complete regulated competitor
Ripple	Hidden Road	Oct 2025	$1.25B	Multi-asset prime brokerage under Ripple (“Ripple Prime”)
Kraken	Backed Finance (xStocks)	Dec 2025	N/A	Tokenized equities capability for Kraken + Nasdaq partnership
Gemini	BITRIA	Feb 2023	N/A	RIA TAMP + Tamarac integration
Securitize	Oasis Pro Markets	Oct 2025	N/A	ATS + broker-dealer licenses for tokenized securities

What this means for Abra: The competitive landscape is consolidating rapidly around two models: (1) full-stack platforms via acquisition (Anchorage, Kraken, Ripple) and (2) product shelves via ETFs (Bitwise, Grayscale). Abra’s organic Trade+Earn+Borrow integration is unique — but the window to establish leadership is narrowing. Speed matters.

Competitive Positioning Matrix

No competitor offers all three pillars (Trade + Earn + Borrow) under an SEC-registered RIA with SMA custody. This is Abra’s moat.

Capability	Abra	Eaglebrook	Anchorage/SFA	Gemini/BITRIA	Coinbase	Bitwise	Grayscale
SEC-registered RIA	✅	✅	✅	✅	❌	✅	❌
Fiduciary duty	✅	✅	✅	✅	❌	✅	❌
SMA custody	✅	✅ (via Anchorage)	✅	✅	Partial	Via Eaglebrook	❌
500+ asset trading	✅	❌	✅	✅	✅	Via ETFs	Via ETFs
Institutional staking	🟡 → ✅	❌	Limited	❌	✅	BSOL ETP	Staking ETPs
Yield strategies	🟡 → ✅	❌	❌	❌	❌	DeFi vaults	❌
Crypto-backed lending	✅	❌	❌	❌	✅ (institutional)	❌	❌
Proprietary stablecoin	✅ (USDAF)	❌	Mountain Protocol	❌	❌ (USDC partner)	❌	❌
Tokenized equities	🔵 2026	❌	Via Securitize parent	❌	Planned	❌	❌
RIA tech integrations	🔵 Building	✅ (Anchorage)	✅	✅ (**Tamarac**)	Limited	Via ETFs	Via ETFs

Key Competitive Insights

1. **Eaglebrook is the upgrade pitch.** 50+ RIAs doing trade-only SMAs. The moment we offer Trade+Earn+Borrow through RIA integrations, their value prop becomes a subset of ours. Target their existing RIA partners.

2. **Anchorage/SFA is the biggest threat.** Federal bank charter + acquired RIA platform. If they add yield and borrow products, they're a direct competitor with a stronger regulatory moat. **Monitor closely.**

3. **Gemini's Tamarac integration is a distribution moat.** Envestnet/Tamarac covers ~18% of RIAs managing $1.3T+. We should evaluate Tamarac integration as a priority alongside Addepar and Orion.

4. **Staking ETPs are commoditizing simple exposure.** Grayscale's staking ETPs (Oct 2025) and Bitwise BSOL mean basic staking is becoming a commodity product. Abra must focus on **active yield strategies** (sUSDAF, covered calls, structured income) that can't be replicated in an ETP wrapper.

5. **Borrow is Abra's clearest blue ocean.** No RIA-facing competitor offers compliant crypto-collateralized borrowing. HNW clients want this to avoid taxable events. This should feature more prominently in sales positioning.

6. **BlockFills' $75M lending losses are a cautionary tale.** Crypto lending has real risk. Our lending risk framework must be bulletproof — this is where the fiduciary duty actually matters.

---

6. Go-To-Market & User Acquisition

Acquisition Strategy (Within SEC RIA Marketing Guidelines)

As a registered RIA, Abra must comply with the SEC Marketing Rule (Rule 206(4)-1) updated in 2022. Key constraints: - No misleading performance claims - Testimonials/endorsements allowed with proper disclosures - Hypothetical performance requires stringent conditions - Must present fair and balanced information

Channel 1: RIA Partnerships (Primary)

- **Goal:** 5-10 signed partners by end 2026
- **Approach:** Direct sales (Andrew Burton + HNW Sales hire), conference sponsorships, Abra Private introductions
- **CAC:** ~$5K-10K per RIA partner (sales team time + onboarding)
- **Payback:** 3-6 months at average $200M AUM per RIA

Channel 2: Direct HNW & Institutional

- **Goal:** $500M in new direct deposits

- **Approach:** Abra Private team, existing client reactivation (SPAC announcement), referral program
- **SPAC announcement reactivation:** 165 former users segmented by tier (Tier 1: $1M+, Tier 2: $100K-$1M, Tier 3: $50K-$100K)
- **Abra Treasury:** Target 10-20 corporate treasury clients (crypto miners, ATM operators, tech companies)

Channel 3: Strategic Partnerships

- **Kraken co-marketing:** Joint announcements, cross-referrals, USDAF promotion
- **Tokenization partners:** Securitize/Ondo integration announcements drive press coverage
- **Conference circuit:** Abundance Summit (March), Consensus, Bitcoin Conference, Future Proof

Channel 4: Content & Thought Leadership

- **Compliant content marketing:** Educational content on digital asset investing for RIAs
- **Bill as spokesperson:** CNBC, Bloomberg, CoinDesk appearances (already active)
- **Webinar series:** “Digital Assets for RIAs” — monthly educational sessions
- **Research reports:** Quarterly market outlook + Abra performance data (with proper disclosures)

Top-of-Funnel Metrics

Channel	H1 2026 Target	H2 2026 Target	Annual
RIA-sourced AUM	$50-100M	$200-500M	$250-600M
Direct HNW deposits	$200-300M	$300-500M	$500-800M
Corporate treasury	$50-100M	$100-200M	$150-300M
Total new AUM	**$300-500M**	**$600M-1.2B**	**$900M-1.7B**

---

7. Growth Targets

AUM Trajectory

Metric	Current (Q1 2026)	Q2 2026	Q3 2026	Q4 2026	End 2026
Total AUM	~$500M	$700M	$1.1B	$1.6B	$2.0B+
Earn participation	15%	25%	35%	40%	40%+

Metric	Current (Q1 2026)	Q2 2026	Q3 2026	Q4 2026	End 2026
Earn AUM	$75M	$175M	$385M	$640M	$800M+
Borrow utilization	5%	8%	12%	15%	15%
Active loan book	$25M	$56M	$132M	$240M	$300M+
RIA partners	0	2-3	5-7	8-10	10

Revenue Projections

Revenue Stream	H1 2026	H2 2026	Full Year 2026
Management & advisory fees	$5.5M	$8.5M	$14.0M
Trading commissions (Prime)	$3.0M	$5.5M	$8.5M
Earn revenue (staking margin + yield fees)	$1.5M	$5.0M	$6.5M
Net interest income (lending)	$0.5M	$2.0M	$2.5M
USDAF spread	$1.0M	$3.0M	$4.0M
RIA platform fees	$0.2M	$1.5M	$1.7M
Total	**$11.7M**	**$25.5M**	**$37.2M**

Note: These projections align directionally with the V14 financial model target of $42.7M. Delta is primarily timing-dependent on RIA ramp and USDAF TVL growth.

---

8. Risks & Mitigations

Regulatory Risk

Risk	Likelihood	Impact	Mitigation
SEC enforcement on staking-a	Medium	High	Structure staking through non-custodial validators; obtain

Risk	Likelihood	Impact	Mitigation
s-a-service			legal opinion on RIA staking authority
Tokenized equities regulatory reversal	Low	Medium	Partner model limits direct regulatory exposure; Abra recommends, partners issue
USDAF classified as security	Low	High	Delta-neutral mechanism is fundamentally different from interest-bearing products that triggered prior enforcement; legal analysis in progress
RIA marketing compliance violation	Medium	Medium	Pre-review all content with compliance; retain outside counsel for marketing materials

Market Risk

Risk	Likelihood	Impact	Mitigation
Crypto bear market reduces AUM	Medium	High	Earn products provide downside protection narrative; USDAF yield persists in bear markets (delta-neutral); diversified revenue streams
Staking yields compress	High	Medium	Diversify yield sources beyond staking (covered calls, USDAF, structured products); focus on value-add beyond raw APY

Risk	Likelihood	Impact	Mitigation
Kraken partnership delays	Medium	Medium	Maintain existing Prime execution as fallback; explore alternative execution venues (FalconX, Hidden Road)

Execution Risk

Risk	Likelihood	Impact	Mitigation
RIA integration takes longer than planned	High	High	Start with simplified referral model (Tier 2) while building full API integration; prioritize Addepar/Orion integrations
Team bandwidth	High	Medium	Key hires: CFO, CMO, Head of HNW Sales, Andrew Burton (starts March 18). Post-SPAC: 25-person sales force
Staking infrastructure complexity	Medium	Medium	Partner with Kiln/Figment rather than building; focus on integration, not infrastructure
Competitive response (Eaglebrook adds yield/borrow)	Medium	Medium	First-mover advantage in integrated platform; USDAF is unique; regulatory moat deepens with each product

Financial Risk

Risk	Likelihood	Impact	Mitigation
$15M bridge funding gap	High	Critical	Active fundraising; Bill directly engaged; failure delays hiring and product development

Risk (pre-SPAC)	Likelihood	Impact	Mitigation
Revenue ramp slower than projected	Medium	High	Conservative burn rate; prioritize revenue-generating features (Earn, Borrow) over nice-to-haves

---

9. Execution Roadmap with DRI Assignments

Every initiative has a **Directly Responsible Individual (DRI)**. Where a DRI is "HIRE: [role]," that capability is blocked until the hire is made. Interim owners are noted.

Current Team Roster

Person	Role	Available Bandwidth	Notes
Bill Barhydt	CEO	Strategic decisions, partnerships, fundraising	Not an execution DRI — approver/sponsor
Deepak	Head of Product	HIGH — owns retail app + product development	Core DRI for all product workstreams
Marissa Kim	Head of Operations	MEDIUM — ops + CMO search + RIA ops	Stretched across multiple priorities
Andrew Burton	Head of Institutional Sales	HIGH (starts ~March 18)	New hire — 100% focused on institutional
Fran Rabias	CCO/Legal (temp)	MEDIUM — compliance + regulatory	Critical for RIA compliance framework

Person	Role	Available Bandwidth	Notes
Zain Ayub	Finance/ Legal	LOW — SPAC demands	Available post-close for financial modeling
Willie Wang	AbraFi/USDAF Lead	HIGH — USDAF + stablecoin integration	DRI for all USDAF/s USDAF work
Lief Storer	Marketing (tactical)	MEDIUM	Under future CMO; execution only
Declan Wolfe	Sales	HIGH — most active closer	HNW direct sales
Celisa Morin	Sales	HIGH — strong closer	HNW direct sales
David Chuang	Data/Analytics	MEDIUM	User data, phone enrichment, reporting
HIRE: CFO	CFO	—	Interviewing (Genni Combs, Andrew Winn)
HIRE: CMO	CMO	—	Marissa leading search
HIRE: Head of HNW Sales	HNW Sales Leader	—	Searching Palm Beach/NYC/Miami
HIRE: CIO for ACM	CIO	—	Sequenced after CFO + CMO +

Person	Role	Available Bandwidth	Notes
			HNW Sales

Q2 2026 (April–June): Foundation

Initiative	DRI	Support	Dependencies	Status
EARN: Expanded staking (ETH, SOL, DOT, ATOM)	Deepak	Willie Wang (USDAF integration)	Kiln/Figment partnership signed	🔵 Not started
EARN: sUSDAF integration in ACM dashboard	Willie Wang	Deepak (product UX)	USDAF live on Solana	🟡 In progress
EARN: Yield Validation Program (10-20 clients)	Deepak	Marissa (client selection)	Staking products live	🔵 Not started
EARN: Conservative Income portfolio	Deepak	HIRE: CIO (interim: Deepak)	Staking + sUSDAF live	🔵 Not started
TRADE: Kraken partnership agreement	Bill (sponsor) → Andrew Burton	Fran (legal review)	Andrew starts March 18	🟡 Relationship exists
TRADE: Kraken API integration	Deepak	Engineering team	Partnership signed	🔵 Blocked on partnership
TRADE: Tokenized equities due diligence	Marissa	Fran (regulatory), Bill (relationships)	None	🔵 Not started

Initiative	DRI	Support	Dependencies	Status
BORROW: Add SOL as collateral	Deepak	Risk team	SOL price feed + risk model	🔵 Not started
BORROW: Pre-approved credit lines	Deepak	Zain (financial modeling)	Risk framework approved	🔵 Not started
BORROW: One-click borrow UX	Deepak	Design team	Credit line feature live	🔵 Not started
DISTRIBUTION: Sign first 2-3 RIAs	Andrew Burton	Bill (intros), Marissa (ops)	Andrew starts, pitch deck ready	🔵 Starts March 18
DISTRIBUTION: Addepar integration dev	Deepak	Engineering team	API specs obtained	🔵 Not started
DISTRIBUTION: Orion integration dev	Deepak	Engineering team	API specs obtained	🔵 Not started
INFRA: Mobile app launch	Deepak	Full product team	Core Trade+Earn+Borrow live	🟡 In progress
HIRE: CFO	Bill	Marissa (recruiting ops)	Active interviews	🟡 Interviewing
HIRE: CMO	Marissa	Bill (final approval)	Search active	🟡 Searching
HIRE: Head of HNW Sales	Bill	Andrew Burton (input)	Search active	🟡 Searching

Q3 2026 (July–September): Scale

Initiative	DRI	Support	Dependencies
EARN: Remaining staking assets (AVAX, TIA, SUI, APT, NEAR)	Deepak	Staking partner (Kiln/Figment)	Q2 staking infrastructure proven

Initiative	DRI	Support	Dependencies
EARN: Balanced + Aggressive Income portfolios	HIRE: CIO (interim: Deepak)	Willie Wang	Validation data from Q2 pilot
EARN: Auto-compounding	Deepak	Engineering	Staking infrastructure live
EARN: BTC covered call strategy	HIRE: CIO (interim: Deepak)	External options partner	CIO hired or strategy outsourced
TRADE: Kraken integration live	Deepak	Engineering	Q2 API integration complete
TRADE: Tokenized equities partnership	Marissa → Andrew Burton	Fran (legal), Bill (deal)	Due diligence complete, partner selected
TRADE: USDAF listed on Kraken	Willie Wang	Andrew Burton (relationship)	Kraken partnership agreement
BORROW: Tokenized equity collateral	Deepak	Fran (regulatory), Zain (risk)	Tokenized equities live
BORROW: Yield-offset repayment	Deepak	Engineering	Earn + Borrow both live
DISTRIBUTION: 5-7 RIA partners	Andrew Burton	HIRE: Head of HNW Sales	Q2 signed partners → onboarding
DISTRIBUTION: Addepar + Orion live	Deepak	Engineering	Q2 dev complete + testing
DISTRIBUTION: First RIA case study	HIRE: CMO (interim: Lief)	Andrew Burton (data)	At least 1 RIA live 90+ days

Q4 2026 (October–December): Compound

Initiative	DRI	Support	Dependencies
EARN: $800M+ Earn AUM	Deepak + Andrew Burton	Full sales team	Products live + RIA distribution
EARN: Advanced yield strategies	HIRE: CIO	Deepak (product), Willie (USDAF)	CIO in place
TRADE: Tokenized equities in income portfolios	HIRE: CIO	Deepak	Equities + income portfolios both live
TRADE: Kraken co-marketing	HIRE: CMO	Andrew Burton, Lief	CMO in place, Kraken agreement
BORROW: $300M+ loan book	Deepak	Sales team (distribution)	Full borrow product suite live
BORROW: Borrow-to-yield one-click	Deepak	Engineering	Earn + Borrow integrated
DISTRIBUTION: 8-10 RIA partners	Andrew Burton	HIRE: Head of HNW Sales	Sales team scaling
DISTRIBUTION: Black Diamond integration	Deepak	Engineering	Q3 Addepar/Orion proven
DISTRIBUTION: 25+ RIA pipeline for 2027	Andrew Burton + HIRE: Head of HNW Sales	HIRE: CMO	Conference circuit complete
TEAM: 25-person sales force building	Andrew Burton + HIRE: Head of HNW Sales	HR/recruiting	Post-SPAC capital available

DRI Gap Analysis

Gap	Impact	Mitigation	Timeline
No CFO	Financial model ownership, investor reporting, capital allocation	Zain covers basics; Robert Half recruiting active	Target: Q2 hire
No CMO	Marketing strategy, RIA content, brand positioning, Kraken co-marketing	Lief handles tactical execution; Marissa searching	Target: Q2 hire
No Head of HNW Sales	Direct HNW acquisition at scale, RIA relationship management	Andrew Burton + Declan + Celisa cover initially	Target: Q2 hire
No CIO for ACM	Yield strategy design, income portfolios, investment research	Deepak + external consultants cover	Target: Q3-Q4 (after above 3 close)
Deepak overloaded	DRI on ~60% of all initiatives — product, engineering, integrations, mobile app	Must prioritize ruthlessly; hire product managers post-SPAC	Critical risk

Key observation: Deepak is the single biggest execution bottleneck. He's DRI on Earn product, Trade integrations, Borrow UX, mobile app, AND portfolio reporting integrations. This is the highest-risk item in the entire plan. Either (a) reduce scope in Q2 to focus on highest-impact items, (b) hire a VP of Engineering to take execution load, or (c) accept slower delivery across all workstreams.

---

10. Financial Model Alignment

Mapping Vision to V14 Investor Model

The V14 financial model shared with investors projects **$42.7M in 2026 revenue**. This section maps every revenue line in the vision document to the investor model categories, ensuring zero daylight between what we tell investors and what we're executing.

V14 Model Revenue Categories

V14 Category	V14 Amount	Vision Doc Mapping	Vision Estimate	Delta	Notes
HNW + Institutional	$19.5M	Management/advisory fees ($14.0M) + Trading commissions ($8.5M)	$22.5M	+$3.0M	Vision is more aggressive on Prime trading volume due to Kraken partnership
AbraFi Revenue	$8.8M	USDAF spread ($4.0M) + Earn revenue ($6.5M)	$10.5M	+$1.7M	Vision includes broader staking revenue beyo

V14 Category	V14 Amount	Vision Doc Mapping	Vision Estimate	Delta	Notes
Investment Income	$5.6M	Net interest income/lending ($2.5M) + portion of Earn revenue	$4.5M	-$1.1M	Vision is more conservative on lending ramp
AFI Token Revenue	$8.9M	Not included in vision (deferred to post-$500M USDAF TVL)	$0M	-$8.9M	**Key gap — see below**
Total	**$42.7M**		**$37.5M**	**-$5.2M**	

Reconciling the $5.2M Gap

The primary delta is the **$8.9M AFI token revenue** in V14 that the vision document defers to the post-$500M USDAF milestone. Two approaches:

Option A: Adjust V14 to Reflect New Strategy - Remove or reduce AFI token revenue for 2026 - Offset with higher RIA platform fees and expanded Earn revenue - More realistic but reduces headline revenue number for investors

Option B: Accelerate Selective AFI Revenue - Launch AFI token for governance/staking without full dApp suite - AFI stakers earn a share of ACM protocol fees (not dApp fees) - Doesn't require LFO/Vega/Swoon to be live - Generates token demand and some revenue while dApps stay on roadmap - Estimated recovery: $3-5M of the $8.9M

Recommendation: Option B — it preserves the investor model while aligning with the team's feedback. AFI token can launch as a governance/revenue-share token tied to ACM performance, independent of the dApp ecosystem. The dApps become future utility expansion for AFI holders.

Revenue-to-Initiative Mapping

Revenue Line	Amount	Key Initiative	DRI	Q2	Q3	Q4
Advisory/management fees	$14.0M	AUM growth → RIA distribution + HNW acquisition	Andrew Burton	$3M	$4.5M	$6.5M
Trading commissions	$8.5M	Kraken integration + Prime volume growth	Deepak + Andrew	$2M	$3M	$3.5M
Earn/staking revenue	$6.5M	Staking expansion + sUSDAF + income portfolios	Deepak + Willie	$0.5M	$2M	$4M
USDAF spread	$4.0M	USDAF TVL growth + Kraken listing	Willie Wang	$0.5M	$1.5M	$2M
Net interest (lending)	$2.5M	Borrow product overhaul + expanded collateral	Deepak	$0.2M	$0.8M	$1.5M
RIA platform fees	$1.7M	RIA partner integrations	Andrew + Deepak	$0M	$0.5M	$1.2M
AFI token (Option B)	$3-5M	AFI governance launch (no dApps required)	Willie + Bill	$0M	$1M	$2-4M
Total	**$40-43M**			**$6.2M**	**$13.3M**	**$20.7-22.7M**

AUM Growth → Revenue Sensitivity

AUM Scenario	End 2026 AUM	Blended Revenue Yield	2026 Revenue
Bear case	$1.2B	2.0%	$28M
Base case	$2.0B	2.1%	$42M
Bull case	$2.8B	2.2%	$55M

The base case at $2B AUM and 2.1% blended yield closely matches the V14 model's $42.7M target. Revenue yield improves as Earn participation and Borrow utilization increase (higher-margin products grow as % of total).

Capital Requirements Alignment

Initiative	Capital Required	Source	Timeline
Kiln/Figment staking infrastructure	$200-500K setup + ongoing	Operating budget	Q2
Kraken API integration (engineering)	$300-500K (eng time)	Operating budget	Q2-Q3
Addepar/Orion integrations	$500K-1M (eng time)	Operating budget	Q2-Q3
Mobile app completion	$500K-1M (eng time)	Operating budget	Q2
Tokenized equities partnership	$200-500K (legal + integration)	Operating budget	Q3
Sales team expansion (25 reps)	$5-8M annual fully loaded	**Post-SPAC $150M raise**	Q4+
CFO + CMO + HNW Sales hires	$1.5-2.5M annual fully loaded	Operating budget / bridge	Q2-Q3
Pre-SPAC total	**$3-5M**	**$15M bridge funding**	Q2-Q3
Post-SPAC total	**$8-12M**	**$150M SPAC proceeds**	Q4+

Critical dependency: The $15M bridge funding is required to execute Q2-Q3 initiatives. Without it, hiring stalls and product development slows. This is the single biggest financial risk to the plan.

2027 Vision (Preview)

With $2B AUM, 10 RIA partners, and the full Trade+Earn+Borrow flywheel spinning: - Scale to 25-50 RIA partners ($2-5B RIA-sourced AUM) - Launch AbraFi dApp ecosystem (LFO, Vega, Swoon) when USDAF TVL exceeds $500M - Target $5B total AUM, $175M revenue - International expansion (EU via MiCA entity, Bermuda via DABA) - AFI token utility expansion into full dApp governance

10. The AbraFi Future — From Roadmap to Reality

The dApp strategy (LFO prediction markets, Vega perpetual DEX, Swoon social trading) is not abandoned — it's **sequenced correctly.** Jupiter didn't launch until Solana had massive liquidity. Our dApps launch when USDAF has massive adoption.

Trigger: USDAF reaches $500M+ in TVL within ACM and on-chain.

At that point: - LFO launches with USDAF as settlement currency → instant liquidity, instant user base - Vega launches for ACM clients wanting permissionless derivatives - Swoon enables social/copy trading across the ACM client base - AFI token aligns incentives across the entire ecosystem

This isn't retreat — it's discipline. Build the foundation first. The dApps become 10x more powerful when launched on top of a $2B+ AUM platform with 50+ RIA partners.

Summary

Abra's 2026 is about **depth, not breadth.** One platform. Three pillars. Complete integration.

Priority	What	Why	DRI	When
1	Earn overhaul	Compelling yield is the #1 retention and growth driver	Deepak + Willie Wang	Q2-Q3
2	Kraken partnership	Trade execution quality + USDAF distribution	Andrew Burton + Bill	Q2
3	RIA distribution	Highest-leverage growth channel	Andrew Burton	Q2 ongoing

Priority	What	Why	DRI	When
4	Borrow simplification	Completes the flywheel, unlocks lending revenue	Deepak	Q2-Q3
5	Tokenized equities	New asset class, differentiation, income portfolios	Marissa → partner TBD	Q3
6	Key hires (CFO, CMO, HNW Sales)	Without these, execution stalls	Bill + Marissa	Q2
7	Mobile app	All three pillars in your pocket	Deepak	Q2

Critical Path Items

1. **$15M bridge funding** — Required to execute Q2-Q3. Without it, hiring and product development stall. *Owner: Bill*
2. **Deepak bandwidth** — DRI on ~60% of initiatives. Must prioritize or get VP Engineering support. *Owner: Bill + Deepak*
3. **CFO hire** — Needed to own financial model, investor reporting, capital allocation. *Actively interviewing.*
4. **Andrew Burton onboarding** — Starts March 18. First 30 days: RIA pitch deck, Kraken relationship, pipeline building. *Self-directed with Bill sponsor.*

The Bottom Line

Revenue target: $40-43M (aligned to V14 investor model via AFI governance token Option B) **AUM target: $2B+** (from ~$500M today) **RIA partners: 5-10** (from zero today) **Key hires: 3** (CFO, CMO, Head of HNW Sales)

Abra is the only platform where you can trade any digital asset, earn institutional-grade yield on every holding, and borrow against your portfolio instantly — all under a fiduciary wrapper with segregated custody. No one else does this. By end of 2026, everyone will know it.
